

BACKLIT MIRRORS

Look into a Spacia Group backlit mirror and feel confident about what you see.

This stylish and efficient source of light is a perfect way to reflect your style—*literally*.

Create a sense of drama and depth without the addition of fixtures by including a sleek Spacia backlit mirror. Your space will emit a gorgeous glow **making you look good in more ways than one.**

SET THE MOOD

Spacia backlit mirrors are designed according to your specifications, allowing the opportunity to customize your look.

Perfecting our craft with continuous improvement, Spacia produces a superior backlit mirror for the hospitality, healthcare, and corporate markets. Consider us a true specialist. Our expertise and experience sets the standard. While our backlits are fully customizable, the following basic elements are recommended (and additional features are available to enhance your mirror):

- Dual LED strips
- 3000K
- 3-Prong Plug 120V, 50/60 Hz

BRAVING THE ELEMENTS

Our mirrors are vinyl backed and treated with a finger-proof sealant. Not only does the sealant circumvent smudges, it prevents the mirror edges from oxidizing. Built-to-last chassis are powder coated and suited for damp locations, and our silicone encased LED strips are waterproof. Spacia mirrors meet or exceed all current brand and industry standards as a result of proven design and quality components. Our sophisticated fabrication ensures consistent, durable, and long-lasting mirrors capable of withstanding the normal everyday wear and tear. All backlit mirrors are covered with a 5 year general warranty and a 15 year light replacement.

IT'S WHAT'S ON THE INSIDE THAT MATTERS

Spacia's backlit mirrors are powered by highly reliable Mean Well drivers. Mean Well's reputable products are sophisticated, undergoing stringent safety, efficiency, and quality procedures that assure longevity. All mirrors are UL and ETL tested, approved, and appropriately labeled.

Mirrors are either hard-wired or fitted with a plug-in unit. We suggest taking advantage of the 3-prong plug for an easier install. With a 3-prong plug, an electrician is not required for mirror installation. Plus, the power source (standard duplex electrical outlet) position has some flexibility. In other words, centering the outlet perfectly behind the chassis is not necessary.

SHED SOME LIGHT

Kelvin: a unit of temperature measurement; in this case a Kelvin describes the color of light

Lumen: a unit of measurement for the brightness of light; in this case more lumens equal more light

Unless otherwise specified, our backlit mirror is equipped with dual 3000K LED strips. 3000K offers a perfect, flattering warm-white illumination ideal for bathroom tasks. While higher Kelvins may appear brighter due to a greater contrast the cooler light provides, they do not actually emit more lumens. (Anything above the 3500K range will deliver a “blue” hue.)

The size of your mirror will determine the number of Lumens—or brightness. The bigger the mirror, the brighter. **No matter the size, however, our dual LED configuration adequately serves as a single light source.**

For example, a 48” w x 36” h backlit with dual 3000K LED strips (similar to mirror pictured above) produces just over 7,000 lm. As reference, 1600 LED lumens is equivalent to a 100-watt incandescent bulb.

3000K

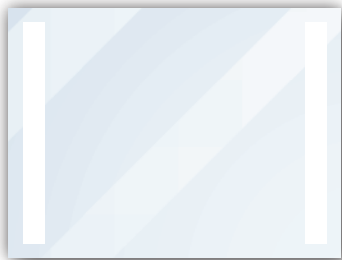

EXPLORE THE POSSIBILITIES

Let the Spacia Group define your unique space by collaborating with a team member. Our back-lit mirrors are fabricated in a variety of styles, shapes and sizes. From a standard design to a fully customized project – and everything in between – we'll pair you with the perfect pieces certain to set your space apart.

Determine how your light is emitted: internally or outwardly—or both. Halo mirrors cast light from the outer edges while our Inset mirrors are internally lit (light emanates through frosted areas in the mirror glass front). Inset mirrors are also available with the Halo effect.

LIGHT REVEAL & FROST PATTERNS

Frost patterns are completely customizable. Our 2 & 4 Side Inset & Halo options are most common. Typically, the frost pattern is 2" - 3" wide and if inset, located 2" - 3" from the mirror edge.

Additional Features

Diffuser(s) For a polished, finished look—especially if sides of mirror are visible—include an acrylic diffuser to conceal the LED strips.

Dimmer Take dynamic control over the level of brightness by adding a dimmable option.

Defogger No need to wipe down the mirror after a steamy shower with our built-in defogging technology. This feature provides a surface free of fog, condensation, streaks, and swirls leaving the glass clean and clear.

Bluetooth Speakers Connect your device wirelessly and stream your favorite music or podcast.

Color Changing Capabilities Talk about setting the mood. From understated to daring and tranquil to stunning, create your desired ambiance with just the right color (pictured above).

Makeup Mirror Include an offset lit mirror for cosmetic and grooming needs.

Night Light Do not disturb. To minimize sleep disruption, add this detail to gently illuminate your space while the backlit is turned off.

LED Clock Display This savvy and sleek accessory keeps you from showing up fashionably late.

Touch Controls Access your added features from the mirror's surface with a simple touch.

Frame Our extensive framing gallery features a variety of choices sure to complement your mirror.

Custom Frosted Patterns Frost patterns are not limited to Inset and Halo options. Add a custom design, logo and/or text for a truly unique look.
